PROFESSIONAL SUMMARY

B.Tech IT student with hands-on experience in Data Science, Machine Learning, and Python. Completed internships and developed AI-based applications including prediction systems and interactive dashboards. Strong in data analysis, model building, and problem-solving.

SKILLS

Programming:	Python, SQL
Data Science:	EDA, Machine Learning, Feature Engineering, Model Evaluation
Tools & Libraries:	Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Streamlit
Other:	Data Visualization, Streamlit App Development, Prompt Engineering

INTERNSHIP

Data Science Intern – Techvolt, Coimbatore Dec 2024

- Performed data preprocessing and exploratory data analysis using Python
- Utilized Pandas and NumPy for efficient data manipulation
- Derived meaningful insights from real-world datasets

Data Science Intern – AK Info Park, Nagercoil Jun 2025

- Built machine learning models such as Logistic Regression and Decision Trees
- Performed model evaluation using accuracy metrics and improved performance through tuning
- Created visualizations using Matplotlib and Seaborn

PROJECTS

Hair Care Companion - AI-Based Hair Analysis System

Tech: Python, Machine Learning, OpenCV, NLP, Streamlit

- Developed an AI-powered system to predict hair fall risk using machine learning models based on user lifestyle and health inputs
- Implemented image processing using OpenCV to analyze hair density from uploaded images
- Built an NLP-based chatbot using prompt engineering to provide personalized hair care advice
- Designed an interactive dashboard using Streamlit with real-time predictions, history tracking, and visual analytics
- Integrated multiple AI components including prediction, vision, chatbot, and recommendation into a modular architecture

Interactive Data Visualization Dashboard

Tech: Python, Streamlit, Pandas, NumPy, Matplotlib, Seaborn

- Built an interactive web-based dashboard for CSV data analysis using Streamlit, enabling real-time data exploration
- Implemented data preprocessing including missing value handling and dynamic filtering based on column data types
- Designed and developed multiple visualizations such as bar, line, scatter, histogram, box plot, and heatmap
- Integrated KPI metrics and automated insight generation including mean, min, max, and correlation analysis
- Enabled users to download processed datasets and deployed the application on Streamlit Cloud for public access
- Improved usability by adding interactive controls for column selection, chart types, and data ranges
- Applied exploratory data analysis techniques to identify patterns and relationships in datasets

EDUCATION

B.Tech in Information Technology (2022–2026)

Arunachala College of Engineering for Women – CGPA: 8.45

Higher Secondary Education (HSC) (2020–2022)

St. Joseph's Convent Higher Secondary School – 72.5%

CERTIFICATIONS & ACHIEVEMENTS

- Prompt Engineering – Simplilearn
- Python for Data Science – Cognitive Class
- Python Training – Besant Technologies
- Participated in Gennovate Hackathon (2024)
- Participated in Alo-Gan Hackathon (2025)
